

The Panel Builder's Best Friend.

For further information about our new range of Modular pilot devices - and our Compact range - please visit www.abb.com/lowvoltage
There you'll meet some real friends who will make life easier for you.

Introducing our new range of Modular pilot devices

Interested? Just turn the page and you'll learn more about our exciting new Modular range. As you'll discover, it has lots of small built-in advantages that add up to a far more economical solution. We are sure it will switch you on!

We're happy to announce a new state-of-the-art range of Modular pilot devices to complement our existing range of Compact devices. ABB now offers you a single large family of pilot devices that meets the highest requirements you can ask for. Our Compact pilot devices have been a sure hit on the market, and we firmly believe our new Modular range will duplicate this success.

The Modular range is naturally designed to work hand in hand with our Compact pilot devices. You can see immediately that the two ranges have the same genes. The front design is identical. The functionality is outstanding. The flexibility is superb. The quality is uncompromising. The performance is second to none. It's ABB all the way. In other words, the best pedigree there is.

Our new Modular pilot device is the panel builder's best friend. Because it will save you a lot of time and trouble ... and a lot of money too. By combining a few standard components you can build up an almost unlimited number of versions. Your imagination is the only limit. This is the most modern range of modular pilot devices on the market. Combined with our Compact range, our Modular devices will give the front of your panels a completely unified look.

You can't find a more versatile Modular pilot device.

Saves you space

Our new Modular pilot device is designed for the 'space age'. Its maximum depth behind the panel is only an amazing 48.5 mm. If you need to beat that, you can choose our Compact devices instead. They are only 42 mm deep, even narrower – and fully compatible. We know that space is a scarce resource inside panels. Our new devices reflect this requirement very obviously. By buying less you get more.

Saves you stock keeping

Our new generation is an extensive, clever system of matching modules. Up to six contact blocks can be added to one actuator, giving almost endless opportunities for the panel builder. There is then a complete choice of pushbuttons, mushroom buttons, selector switches, key-operated switches, toggle switches and emergency stops – all illuminated or non-illuminated. And the bezels are available in three different styles – black plastic, chrome plastic and metal.

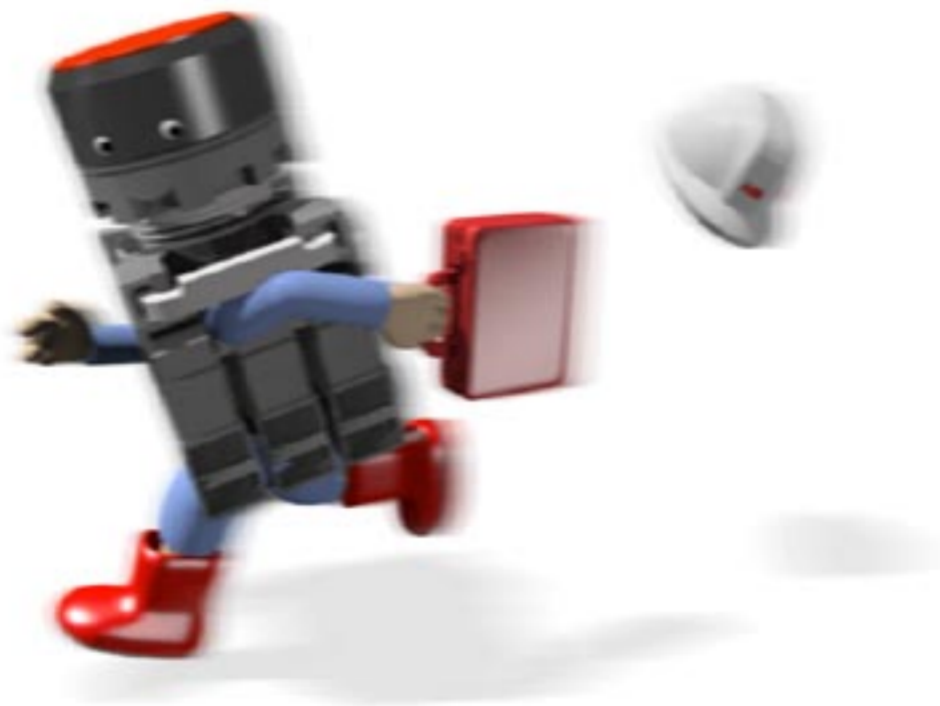

Saves worries

The new Modular pilot device is robust, to say the least. It is built to live in the toughest of environments. It can be used both indoors and outdoors. It meets the protection-class standards IP66, UL 12 and 13, and 4X. The unique built-in wiping action provides extra contact reliability. And the installation is completely worry-free. Instead of an old-fashioned sleeve to fasten the actuator you have a clever safety holder. Click! And it's on.

Saves you problems

Our new Modular range of devices is designed to make your life more comfortable. From a technical point of view, you can't find a more up-to-date solution. Our Modular range is leading-edge in every detail. In addition, you get a clever and versatile system of modules whose fast and efficient mounting will save you lots of worries. Just relax...

Saves you time

The modular design speeds up mounting. To begin with, the smart locking nut makes installation extremely convenient and fast. But there's more to it: the installation of the contact blocks and the actuators can be done separately. The ingenious snap-on function makes this easy. All wiring can be done before the blocks are snapped onto the actuators. This not only saves time but also lots of blood, sweat and curses.

Saves you money

Ultimately, our new Modular pilot device is about saving money. The purchase price is not the critical issue. The deciding factor is how much time and worry you can save in the mounting process without sacrificing functionality, safety or reliability. In this respect, you can't make a better investment than our Modular pilot device. It will pay off in both the short-term and the long-term perspective.
